## Prostate Examination Simulator

RX-L63

### Description

- This Simulator stands as an invaluable resource for medical education, enabling practitioners to enhance their diagnostic skills and deepen their understanding of prostate carcinoma across its diverse stages.
- Basing on different degrees of prostate carcinoma, this set has four interchangeable prostates:
- Benign, slightly enlarged, but normal prostate gland simulates benign stage.
- Prostate with two discreet, hard nodules (one is at left lobe; the other is at right lobe) simulate beginning stage.
- Prostate with easily palpable large mass simulate intermediate stage. The small nodule has increased in size and has become an external hard mass on the surface of the gland.
- Prostate with malignant invasive cancer simulate terminal stage. This gland is totally replaced with carcinoma. The entire gland will feel hard and irregular.
